Linnea elevate
Height Adjustable Bench Desking

Single crank handle height adjustable workstation.

Fixed height workstations can be modified using a conversion kit to transform into a height adjustable desk.

Single Bench - Height Adjustable

Elevate single workstations are supplied with sliding tops and a horizontal cable tray as standard. Optional modesty panels are compatible.

Single Bench - Height Adjustable & Fixed Height

Fixed height workstations (left) suit use within the same workspace as the crank handle height adjustable workstations (right), as the support arms on the fixed workstation have been designed to complement the crank handle arms.

Double Bench - Height Adjustable

Elevate desking provides options for fixed height or crank handle height adjustment. A fixed height workstation can be retrofitted with a conversion kit to enable height adjustment on a chosen work surface.

Back to back double bench tops are scalloped on the back edge to enable cable access into the horizontal cable tray. In addition, the tops slide forward providing access to the horizontal cable tray.

Elevate back to back double workstations offer an integrated solution with leg sharing to maximise underdesk space and legroom for the user.

Double Bench - Height Adjustable

Elevate crank handle height adjustable workstations enable the user to adjust the desktop height from 695mm – 875mm. When adjusted, the crank handle can be retracted or removed from the frame.

Double Bench - Height Adjustable
Screen panels are optional and fix to the workstation frame. When installed, the screen remains at a fixed height enabling each work surface to ascend and descend without adjusting the screen height.

Manual crank height adjustment via a rotating handle.

An electric height adjustable option is available. The desk height is adjusted via a keypad allowing the work surface to be raised or lowered.

Fixed height options offer a desk height of 725mm. However, an optional retrofit conversion kit is available enabling any fixed height desk top to be converted into a height adjustable option.

A high capacity horizontal cable tray is an optional extra. The tray fixes to the two internal cross rails and can accommodate large power modules and data blocks. (illustrated in red above)
