Environmental.

We are a proud PEFC member
Programme For The Endorsement Of Forest Certification (PEFC)

PEFC is the world's largest forest certification organisation.
PEFC is dedicated to promoting Sustainable Forest Management through independent third-party certification.
PEFC expands forest certification globally through its unique bottom-up approach to certification and is the certification system of choice for family and community-owned forests.
PEFC are an international non-profit, non-governmental organisation devoted to ensuring that forests are managed according to environmental, social and economic criteria.

Our Plastic Awareness Policy.

We adhere to our Circular Economy business model that aims to deliver 100% recyclability.
The use of recycled plastic in place of virgin resin typically results in reduced energy consumption, lower cost, and reduced environmental impact.
Our Flare Storage Unit products permits all plastic components to be recycled through curbside programs. The following illustrates what type of plastic is used and its recyclable properties.

WHAT WE USE	RESIN TYPE	RESIN ID CODE
MDF Panel Edging. Height Adjustable Feet.	Acrylonitrile Butadiene Styrene. Polypropylene.	(ABS) 9 (PP) 5
Packaging Materials: Packaging Cling Film.	 Low Density Polythene.	 (LDPE) 4

Low Density Polyethylene (LDPE)
LDPE is not often recycled through curbside programs, but some communities will accept it.

Polypropylene (PP)
Can be recycled through some curbside programs.

Acrylonitrile–Butadiene–Styrene (ABS)
ABS is recycled by first shredding used plastics to produce shredded plastics. After this step, metals and undesirable plastics are separated from the shredded plastics to produce separated plastics.
