Q
task chair

Part of the Boss Design Group

The Q task chair combines comfort, aesthetic styling and functionality. It delivers a height adjustable mesh-back which provides a flexible and breathable surface, owing to the use of 3D knit mesh technology. This ensures superb life-long support for all users.

Q boasts a new breed of synchronised mechanism that gives enhanced geometry and assures the user of complete comfort throughout its range of movement. A 70mm seat slide and 3 degree forward seat tilt are standard features. Q is also available in a choice of 9 vibrant mesh colours.

Flex visitor chair

The Flex cantilever visitor armchair has a high level of comfort due to the design, shape and construction of its 25mm tubular frame. The seat design allows it to react in accordance with the user's movements, whilst the backrest is constructed using flexible plastic with an integrated arm.

Designed for the environment

The Q task chair range has been designed to minimise any negative effect on the environment. During its life, components such as the upholstery and arms can be easily removed and replaced if required.

At the end of its life the chair can simply be disassembled so that each component can be appropriately recycled.

Q Environmental Credentials

64089 - Red

66064 - Dark Blue

60061 - White

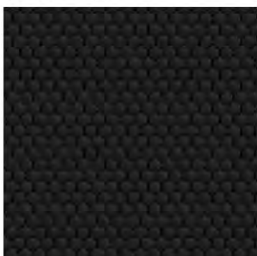

60011 - Light Grey

60025 - Dark Grey

60999 - Black

How to use your Q task chair

Back Height

Reach around and press the button on the rear of the backrest. Raise the back until the pronounced lumbar support is aligned with your own lumbar region. The back locates in four positions.

Seat Height

Lift the paddle located under the right hand side of your seat, whilst lifting your weight out of the chair to allow the seat to rise to the desired position. To lower the height, lift the paddle again leaving your body weight on the seat. The seat will lock at the height at which the handle is released.

Arm Height

Press the buttons on the outside of the arm risers to raise and lower the arms. Ensure that both arm pads are the same height and release the button to lock into position. Set the arm height so that your forearms are set at 90° when your shoulders are relaxed.

Seat Depth

Whilst seated push the button on the right hand side of the seat and slide the seat into your desired position. Release the button to lock the seat.

Back Recline Tension

To unlock the back of the chair and allow it to move with your body, push down the paddle found under the left hand side of your seat. To adjust the tension to suit your own weight, pull out the knob under the right-hand-side of the seat and rotate it clockwise to increase the tension and anti-clockwise to decrease the tension.

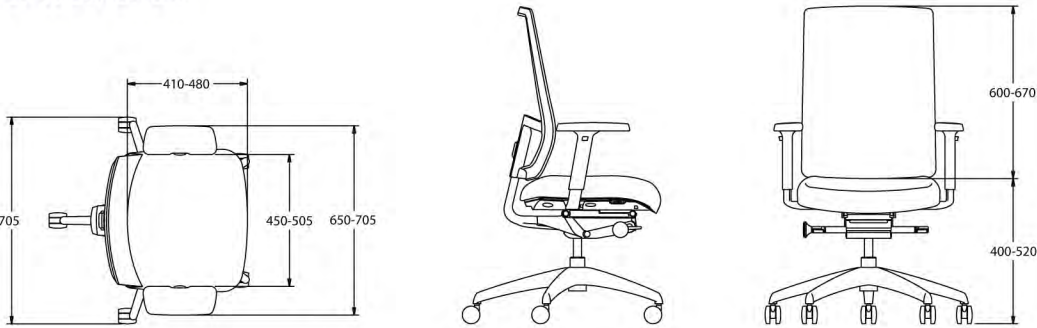

Forward Seat Tilt

- Under the left-hand-side of your seat you will find a paddle, which can be set in any one of three positions.
- 1) When the paddle is in the raised position, the back angle will be locked in any one of three positions.
 - 2) When the paddle is in the middle position the back is unlocked and remains in 'free-float' with the seat returning to a flat position (parallel to the floor) when the back is in the upright position.
 - 3) When the paddle is in the lower position, the chair will remain in 'free-float'. But the seat will return to a 3 degree forward tilt when the back is in the upright position.

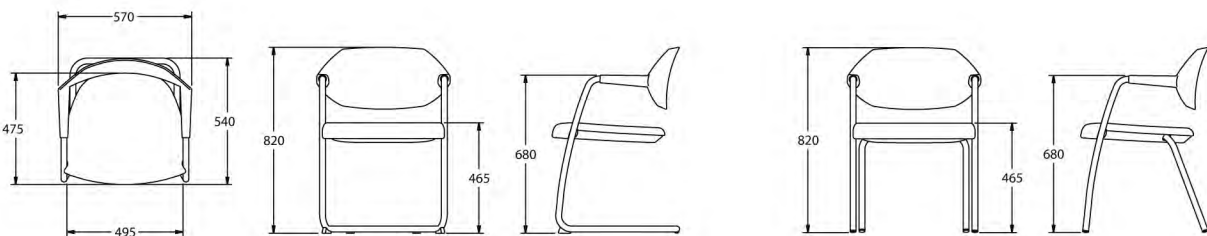

Further information can be viewed on your chairs user instructions located beneath your seat on the left.
